## About Me

Software Engineer with hands-on experience building scalable backends, reliable transactional systems, and performant user interfaces. Focused on concurrency optimization, latency profiling, and owning core systems end-to-end. Passionate about software reliability and clean design.

## Education

**University of Science - VNUHCM - BS in Software Engineering** 2022 – Expected Oct 2026

- GPA: **3.67/4.0 (3.77/4.0 in Major)**
- **Cambridge English: Preliminary** – CEFR B2

## Skills

**Programming Languages:** Java, TypeScript, Python, SQL  
**Frameworks & Core:** Spring Boot, NestJS, Next.js, Flutter  
**Databases:** PostgreSQL, MySQL, Redis  
**Infrastructure & DevOps:** Docker, GitHub Actions, Nginx

## Work Experience

**Software Engineer** – Jarvis AI Business (Helpdesk & POS Retail) Dec 2025 – Aug 2026

- Directed technical scope for a 4-person team, identifying structural gaps – missing features for branches, multi-tenant, custom fields, import/export – and extending the same model into a **dynamic import/export** layer.
- Architected a **Server-Driven UI** (SDUI) registry (**NestJS**, **Next.js**) for zero-code merchant storefront configuration, removing the engineering bottleneck to onboarding the pilot customer's catalog.
- Built multi-tenant custom domain support with automated TLS provisioning (**Cloudflare Custom Hostnames API**, **Nginx**), meeting the pilot customer's requirement to run their storefront on their own domain.
- Preserved live storefront functionality during a duplicate-content SEO conflict by fetching blog content server-side.

## Projects

**AI Primary** – Graduation Project – *Team of 5* [📱 Mobile Repo](#) [🔗](#)  
[🔗 Backend Repo](#) [🔗](#)  
[🔗 Gateway Repo](#) [🔗](#)

- Developed an AI-powered educational resource generator published to the Play Store and App Store, utilizing a cross-platform **Flutter** client integrated with **Keycloak IAM** and Google OAuth 2.0.
- Led the design of a **modular monolith backend** using **Java**, **Spring Boot**, and **Spring Modulith**.
- Solely architected a **GenAI Gateway** proxy (Python, FastAPI, LangChain) supporting OpenAI, Gemini, and Vertex AI, implementing **Server-Sent Events** (SSE) for streaming document outlines and media generation.
- Prevented duplicate AI-generation by designing a distributed **Idempotency Key** middleware (**Redis** caching, **PostgreSQL** transactional persistence).
